

Standard Mic Cubes on Mounted Studio & Podcast

A simple extension-tube solution

Most studio and podcast microphones mounted on desk arms or boom mounts **cannot use a standard 40 mm mic cube**, because the cube is designed to slide onto a hand-held microphone barrel. Where the mount connection allows, this can be solved using an extension tube.

How it works (in minutes)

1. Unscrew the connector above the microphone
2. Screw in the extension tube (3/8" or 5/8")
3. Slide the branded mic cube onto the tube
4. Screw the microphone onto the other end
5. Align and hand-tighten

The mic cube is held firmly by its **acoustic foam insert**.

Fast branding changeover

- Connected in minutes
- Removed in minutes
- Swap cubes easily for different podcasts or shows
- No modification to the microphone

Universal extension tube kit

- Two extension tubes
- 3/8" female → 5/8" male adapter
- 5/8" female → 3/8" male adapter

Fits all common studio mounts, whether hanging or desk-mounted.

Result

A clean, professional mic cube installation with quick branding changes — ideal for studios, podcasts, and shared recording spaces.
